

FREQUENTLY ASKED QUESTIONS

What is outdoor all-weather resin wicker made from?

Our outdoor all-weather resin wicker is a man-made product and is 100% recyclable (due to its very long life span, our resin wicker furniture is an excellent environmental choice). It is manufactured as a strong polymer similar to vinyl with fantastic resistivity to sun, rain and cold and retains great flexibility. It's completely waterproof! If scratched, the wicker will maintain its original color as the color goes right through. The resin is extruded to form the desired shape and size of the man made wicker vine. It is then cut to length and handcrafted into outdoor wicker furniture.

What are the frames made out of?

All-weather resin wicker is generally used over an aluminum frame to create light-weight outdoor furniture (although some models are made of solid steel). The frame of the patio furniture consists of rust-free powder-coated aluminum and is several times plaited. The main advantage of aluminum is its light weight. In patio furniture construction, aluminum is superior to other metals due to its durability. It is absolutely rust-free and therefore not subject to the same degree of corrosion as steel e.g. For high stability, cage construction is applied. Steel on the other hand is heavy and great for patios that might be exposed to windy conditions.

How do I clean outdoor all-weather resin wicker?

You can use a mild detergent and soft rag or brush to clean your all-weather wicker. Sometimes a good blast from your garden hose or pressure washer can clean it right up.

Will the sunlight affect my outdoor all-weather resin wicker furniture?

No, sunlight will not affect your outdoor all-weather wicker furniture. Feel free to use your outdoor all-weather wicker in the sun, in the shade or in the rain. Many like to say, the better you take care of any furniture, the longer it will last. So, keeping it out of direct sunlight or any other nasty elements can only help lengthen the life and beauty of your outdoor all-weather wicker furniture. We say, spend more time enjoying your outdoor all-weather resin wicker in the sun or rain rather than worrying about it. It will be many years before you have to worry about it degrading, if ever.

Can I leave my outdoor all-weather wicker furniture outside during cold weather?

Absolutely! Deep cold weather itself will not harm outdoor all-weather wicker furniture. What you need to know is that you must be careful about striking the furniture with something while it is extremely cold as it might be brittle. Although it is unlikely, there is a possibility that it can crack the resin. If you live in an area where the temperatures outside reach 10 degrees F. or lower, you should ensure that your furniture is protected from being struck with anything during deep cold conditions. As the temperature decreases below 10 degrees F., the chances of strike damage increases. Strike damage causes the resin wicker material to crack if struck hard in extreme cold conditions. We recommend stacking your set and covering it with a tarp to offer some protection.
