

# INSTALLATION

## PET DECK INSTALLATION INSTRUCTIONS

The FlexDeck® PetDeck® protects your floors and deck surface from pet claws, kennels, and any other dings or gouges waiting to happen. Definitely the perfect perch for your pooch!

This PetDeck® set is composed of:

- 9 (12"x1"x12") interlocking deck tiles
- 12 (12"x1"x4") borders
- 4 (4"x1"x4") corner reducers

### **No tools required**

Install your PetDeck® in three easy steps:

1.) Make sure you have a 10.76 sq ft area of dry, smooth surface. PetDeck® can be installed over most surfaces as long as those surfaces are smooth. Avoid rough and uneven spots.

2.) Start with the 12"x1"x12" tiles. Once you have chosen your perfect spot, you can start laying down the tiles in a 3x3 fashion. Keep in mind that this is the central portion of the deck and it must have a perfect square shape.

3.) Link borders and corner reducers to the structure. Snap each one of the 12"x1"x4" borders together with the surrounding tiles of the structure you already have. Finally, lock the corner reducers to each one of the corners of your PetDeck®.
