

TECHNICAL DATA

Kontiki Composite Interlocking QuickDeck Tiles are an innovative product designed to be used by anyone from a do-it-yourselfer, to contractors looking for an easy solution to instantly beautify any solid surface, patio, balcony, next to a pool or spa, or even in kitchen and bathroom areas.

Kontiki Interlocking composite wood deck tiles are made from 100% recycled plastic and natural fiber materials and features a real wood grain pattern.

These deck tiles have a unique interlocking assembly system, allowing for the tiles to connect together on any side for ease of installation. Just snap any two pieces and any two sides together to easily create a deck for your patio or backyard. Most decks can be easily installed in a couple of hours.

Made with a durable recycled ABS plastic (recycled car bumpers) frame, these deck tiles feature a more rigid and robust backing to withstand the toughest punishments, and will not become brittle in extremely cold weather. The deck tile surface is made from 100% post consumer HDPE Plastic (Recycled milk jugs), and natural fibers, for a realistic wood look. Kontiki deck tiles also have added UV inhibitors to keep the sun's harmful rays at bay, and require little maintenance. The occasional washing with a hose to remove dirt is all you'll ever need. They are raised to allow for proper moisture drainage. There is no bending, warping, splitting or cracking in these composite deck tiles.

- Easy to Install with No Tools Required
- Made from 100% recycled material
- May be cut with a power saw for custom applications
- Ideal Over damaged concrete patios or for Creating Roof Decks
- Ready to Use Right Out of the Box
- Four Way Interlocking System
- Reusable
- 10 year Warranty
- Natural Wood grain Pattern
