Closed Cell Polyurethane Foam: Below Grade Installation

Please note that ALL Stoneworks products are manufactured with a proprietary blend of Closed Cell Polyurethane Foam. Closed Cell Polyurethane Foam will not absorb moisture.

Stoneworks products will not absorb any water or moisture of any kind. Stoneworks products can be installed below grade. Installations below grade will not affect the physical properties of the polyurethane product. However, the coloration of the product when placed below grade can have permanent staining or color change as a result of leaching agents that occur naturally in mineral rich soils. This possible discoloration would only occur in the below grade portion of the product.

Please note that Stoneworks products are not meant to be installed where weed eaters or string trimmers might come in contact with the surface. String trimmers may mar the surface and expose raw polyurethane, voiding the warranty.
