Because most people spend as much as 90% of their time indoors— at home, work or school – indoor air quality is an important issue for architects, designers and purchasers of interior building products and materials. Poor indoor air quality is caused by inadequate ventilation, poor cleaning, and/or excessive emissions of volatile organic compounds (VOCs) from surfaces and finishes.

FloorScore measures the most important risk to indoor air quality: the emission level of specific VOCs.

Assure your customers that your hard surface flooring and flooring adhesive products meet the strict indoor air quality (IAQ) requirements of FloorScore®, the cost-effective certification program developed by Resilient Floor Covering Institute (RFCI) with SCS Global Services (SCS).

Products bearing the FloorScore label meet the indoor air quality emissions criteria of LEED, CHPS, the Green Guide for Health Care, and are recognized by a long list of healthy building programs. FloorScore certification is also a valuable stepping stone to sustainability certification under NSF/ANSI 332.

Shaw resilient offers a variety of products that are FloorScore certified. Just look for this icon!
