

CLEANING INSTRUCTIONS

Most liquid soaps will work with our product. There is a special mildew cleaning solution called M-31. It is very effective in removing mildew from vinyl siding, and should also work on our product. It is strongly recommend to test the product you choose on a small area first, to check for color fastness. Stoneworks products are designed to be resistant to the elements as well as all but the most caustic man made products. Still it would be prudent to test a small area first with any new product.

Procedure:

You can either use a soft bristle brush or a pressure washer. If you use a pressure washer, be SURE not to get closer than 12 inches and not more than 1500 PSI.

Start with spray of soap and gently scrub the area using a soft bristle brush. Rinse area with a final pressure spray rinse with the above criteria in mind.
